

WITH PRESIZE, PERFECT LENSES ARE JUST A CLICK AWAY

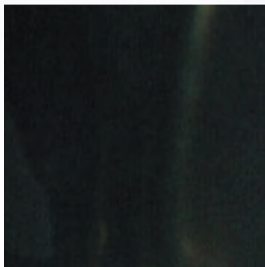

PRESIZE™
PRECISION CUT LENSES

Presize: the most accurate remote edging system available

Presize, Essilor's highly accurate and cost-effective remote edging system, allows you to order lenses precisely cut to shape and size so you simply have to fit the lenses into the frame.

Presize uses a Phi scanner to accurately trace the frame and Opsys, our exclusive software, to determine the lens type before sending the information directly to Essilor. The lenses will be delivered ready-edged for you to mount into your patients chosen frame.

Presize will run on most computer systems and the Opsys software, plus support, are provided completely free of charge.

Precise

Once the patient has chosen their frame, you simply enter their prescription details into Opsys and trace the frame using the Phi scanner. The information is then sent directly to Essilor and, once the order is received, the majority of stock lenses are cut within a day and just an additional day for RX lenses, reducing the time it takes for your patients to receive their spectacles.

Accurate

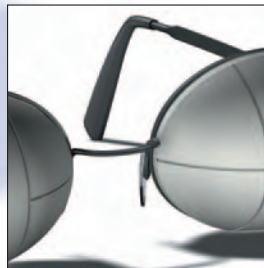

We guarantee all lenses are edged to exact standards (within 1/100th of a mm) and because the risk of lens breakage is transferred to Essilor, the possibility of expensive edging errors is removed. All types of materials can be processed including Airwear, so you can offer your customers a wide choice of materials.

Efficient

With Presize not only do you receive a speedy service; you also get the benefit of Essilor's online tracking system. This allows you to see exactly where your order is within Essilor every time you send a new order. You can then give your customers accurate delivery dates, so they know exactly when they can collect their spectacles.

Cost-effective

Presize is an extremely cost effective glazing solution. If you sign up for a monthly fee we will charge you a fixed amount no matter how many lenses you order. The vast majority of customers who take advantage of this benefit from significant glazing cost savings. Alternatively, you can sign up for our pay as you order package. Whichever you choose, installation, support and training are all provided free of charge.

So if you'd like to find out more about Presize and the time and money it could save you, contact your Essilor Account Manager to arrange an appointment.
