

Transitions® V

A Complete Range Available on all Materials

Essilor Transitions have always been high performance lenses, and over the years this performance has continued to evolve. Not only in terms of speed of reaction but also in terms of the availability of lens materials.

With previous generations of Transitions lenses, we have concentrated on the darkening of the lens. Speed of reaction and the darkness have been paramount in past performance and have enabled us for the first time to position Transitions as a high performance sun lens, ideal for people who want to protect their eyes from harmful UV rays.

As an Essilor customer, you'll know we are committed to constantly improving our products, and as such, we are pleased to bring the latest in photochromic technology - Transitions V.

Faster fadeback

Transitions V technology offers a far greater fade back speed than any previous generations of Transitions, and it is up to three times faster at fading than that of other transitions lenses on the market.

This is great news for your patients as it means that their lenses will be lighter quicker when they go indoors, giving substantial improved visual comfort.

Available with Crizal with Scotchgard Protector coating for ease of cleaning, greater transparency and optimal visual comfort.

Transitions V

- Offering optimal protection against UV and glare
- Providing unparalleled levels of comfort and visual quality
- Performance enhanced with Crizal Alizé AR coating
